

TALK TO YOUR BREEDER FIRST

**Please remember your breeder knows more about your new puppy than anyone.
Talk to your breeder first.**

VACCINATIONS

Please talk not only with your veterinarian but your breeder regarding what and when to vaccinate your puppy. Not only is it very important NOT to over vaccinate your IWS puppy, but also what you vaccinate your puppy for.

WORMING

Talk to your veterinarian about this along with when or if to start Heartworm prevention.

FEEDING

Again, talk to your breeder about what, when and how much to feed your puppy. As the puppy grows you will need to increase the amount of food you feed.

NAIL TRIMMING

Start early trimming your pup's nails. I have never met a dog that really liked it, but starting early stops most of the battles. Start with just feeling the toes and feet while your pup sits in your lap or beside you. Then you can use either nippers or a grinder to keep the nails in shape.

GROOMING

I have included a schedule of when and what tools to use.
